

Silverwood Drive

DRAINAGE IMPROVEMENT PROJECT

Project Introduction

This drainage improvement project is being completed to reduce the frequency and severity of roadway ponding and backyard flooding, and to reduce maintenance costs incurred by the City for cleaning the drainage system. The project will result in improved drainage capacity and fewer clogs in the drainage system. The improvements will take place primarily on Silverwood Drive and Sweetwood Drive from Hull Street Road to Ullswater Avenue. The project area is highlighted in blue on the map below.

Project Schedule

Project Assignment: September 2019
Survey & Preliminary Design: Cardinal Surveying
Engineering Design: Woolpert
Construction Assignment: Spring/Summer 2020

WHAT HAPPENS NEXT:

Field Investigation & Survey Work

Survey work will be performed by Cardinal Surveying to collect existing data for proposed design improvements. Residents may notice vehicles in the neighborhood and survey crews collecting data and performing field investigations. At times, the teams may need to access portions of private properties within the project area to collect information and to determine right of way boundaries.

Public Meeting

Public meetings will be held to present proposed improvements and receive feedback. Times and locations of these meetings will be announced as the project progresses.

Project Duration

Overall, the design and survey is planned to begin in November 2019. The project will be advertised for construction in Spring 2020. Prior to the commencement of construction, a letter will be sent to adjacent property owners that will notify the neighborhood of the start date.
